

SQLRun for HP NonStop Systems

A powerful tool to schedule and extract SQL reports in the HP NonStop environment

As more and more customers use HP NonStop servers and adopt NonStop SQL as their database of choice, it is becoming apparent that users throughout the enterprise need access to this database. In order to update vendors, partners, customers and management on the most current information in the database, enterprises need to ensure that the latest changes to the database proliferate throughout the user community.

The SQLRun product lets users create a customized SQL report. This report is stored on the HP NonStop Server. Each report is given a unique name. A report is executed at a pre-configured time (every day, twice a week, once every week etc.) and the resulting report is e-mailed to the user as an attachment. This product does not need ODBC. This product can be used to automatically produce and send reports from NonStop SQL to managers, vendors, partners etc.

The Features

ROBUST
SCALEABLE
SIMPLE

SQLRun is designed with a rich set of standard features that are easy to configure and use.

- Designed to be very robust, secure and scalable
- Configured and administered using a web browser interface
- Provides a easy way to design, store and schedule reports
- Sends reports as an attachment to an e-mail
- Works with SQL/MP as well as SQL/MX
- Managers get notified when the report is delivered
- Reports can be delivered in TXT/HTML/PDF or ZIP formats
- Each report is given a unique name, allowing multiple users to execute it
- Reports can be created on demand or follow a pre-defined schedule

For an enterprise to stay one step ahead of its competition, it needs to be agile and pro-active. Using the SQLRun product suite from Genesys Solutions, you can ensure that the right information gets to the key people throughout your organization, thus increasing the overall efficiency of the enterprise. SQLRun is a very robust, secure and scaleable product designed and developed for the HP NonStop Server. Whether you want to update a vendor, a partner, a manager or a customer with the latest information, it is easy to do so using the SQLRun product suite.

SQLRun for HP NonStop Systems

A powerful tool to schedule and extract SQL reports in the HP NonStop environment

The Benefits

- Saves you time and effort by automatically extracting the report and delivers it as an e-mail attachment
- Create a report once and execute it multiple times
- Very low impact on system resources
- Web browser interface supports multiple concurrent users
- Follows the same syntax as SQL ReportWriter
- Increases organizational efficiency
- Provides an easy mechanism to deliver every report with a customized message to each recipient

The Company

Genesys Solutions has been providing world-class products and services since 1995. Our expertise is in the cable and financial industries. We count as our clients, some of the largest and prominent names in today's business world. We provide unmatched 7x24 technical support from our Denver facilities. Our reputation in the marketplace is outstanding because we deliver on our promises.

The Technology

SQLRun consists of two components. One component executes on the HP NonStop Server (S Series, running NSK ver. G06 or later) and the second component executes on a windows based workstation with an interface to any e-mail server. The two components communicate via TCP/IP. Users access SQLRun (for administration and configuration purposes) using their web browser (Only IE5.0 or later is supported).
